

Company Info

TEECOM exists at the intersection and integration of people, buildings, and technology. We work with owners, architects, and design teams to deliver foundational flexibility via integrated technology design. It is our mission to create buildings and spaces that inspire, engage, promote collaboration, and ultimately enhance the user experience in the built environment.

Our practice groups include technology project management, strategy, research, and integrated technology design and engineering. The disciplines within our design and engineering department include telecommunications, security, audiovisual, acoustics, network, wireless, VoIP, and other electronic systems.

At TEECOM, you will have the opportunity to:

1. Work on challenging and rewarding projects that will help you grow as an individual and a working professional, while playing a key role in the future of technology in buildings.
2. Collaborate with and be mentored by leading experts in multiple technology disciplines, while focusing on DISCIPLINE design for cutting edge architectural projects.

Fundamental to everything we do, from engineering and strategy to technology project management, are our core principles of care, trust, and value. If you come to work for us, we expect you to bring a background that clearly demonstrates you share this commitment.

Job Title: Designer/Engineer – Telecommunications/Security

Job Description:

Do you have a passion for technology and design but are still unsure what discipline is right for you? As a Designer at TEECOM, you'll be provided with the skills, knowledge, and resources to discover what discipline is your passion, whether in telecommunications, security, or audiovisual design.

Essential Duties and Responsibilities

- Prepare CAD or BIM drawings.
- Work with clients, manufacturers, and design team members to complete assigned tasks under direction from Senior staff.
- Attend client meetings with Senior Design staff members and prepare meeting notes.
- Perform project onsite surveys.
- Perform field observations and prepare field reports.
- Conduct product research.
- Conduct specialized research and prepare information documents.
- Provide assistance to other design staff members.

Desired Experience

- Education/Degree/Major: BS in Engineering (electrical preferred but not required)
- Experience (preferred but not required): AutoCAD 2009+, Revit

Opportunities for Personal Growth

- Become a member of industry organizations.

- Pursue industry certifications.
- Be paired with a mentor who supports you throughout your professional growth.
- Establish and achieve short and long-term goals.

Best Place to Work

- Become a part of TEECOM's fun, flexible, and collaborative culture for the ultimate work-life balance/blend.
